

Rule 6 - DISCONNECTING SERVICE LINE FROM MAIN (BUILDING DISMANTLED)

A water service may be cut off at the main when the building it serves is either removed or dismantled. If a new structure is planned for at the time of demolition, Rule 3 may be applied if a 1/2" service line was serving the demolished structure. If existing service line is inadequate to serve a new building, a larger service tap shall be required by the Water Department. Current tapping costs shall be charged to the property for the new tap and service. Additional capacity fees shall apply for a new service larger than the disconnected service. A credit in the amount of the existing capacity shall be applied to a larger tap or additional taps.

A customer who was connected to a wastewater collection system or water distribution system prior to January 1, 2005, or who has paid a Capacity Fee or Front Foot Fee may replace a house or other structure on the same lot without paying the Capacity Fee provided the connection is the same size. If the customer wants to upgrade the size of an existing tap they will be credited the fees towards the cost of the larger service.
